

**EMBARGOED: OCTOBER 29, 2025, 4PM CET**

## Keep the ideas flowing and make more music with Maschine 3.4

*NI's flagship production software gets an overhauled modulation editor, smoother workflow on desktop, and more compatibility for Maschine+*

**Berlin, October 29, 2025** – Native Instruments has released Maschine 3.4, continuing on a string of updates to its hybrid production and performance platform.

Maschine has always been about keeping ideas flowing, and Maschine 3.4 does just that by introducing a redesigned modulation editor with huge improvements for the desktop, additional Play Series instruments and effects for Maschine+

standalone, and a set of workflow upgrades that make creating music smoother, faster, and more fluid than ever.

Maschine 3.4 adds long-requested tools like curves, marquee select, and pencil drawing to a modernized modulation editor, matching DAW standards while preserving its fast, intuitive workflow. With Play Series on Maschine+ and refined arranging tools, it's a hearty update that further improves the Maschine platform.

## Key Features

- **Modernized modulation editor** — Producers can now draw curves with the pencil tool and edit multiple points at once, unlocking expressive control and DAW-level precision inside Maschine.
- **Workflow refinements (desktop)** — Grid snapping, drag-to-edit, updated colors, keyboard shortcuts, and a refreshed UI design streamline production on the laptop or desktop.
- **More compatibility on Maschine+** — Run newly compatible effects and Play Series instruments natively on Maschine+ with bounce-in-place for CPU management. No computer required.
  - **Newly compatible:** 24K Keys & Drums, Discoteca Keys & Drums, Empire Breaks, Duets, Feel it, Kontakt Factory Selection 2, and effects like Replika, Driver, Tape Wobble, and more.

## A Note for Maschine+ users

The Play Series compatibility on Maschine+ is an unlock for existing owners. A license is needed for Play Series instruments or effects to become available for use on Maschine+ devices. For optimal performance when using sample-based instruments like the Play Series, a high-speed SD card is recommended.
