

An environment carefully designed to support cognitive development through assessing and strengthening cognitive skills by means of science-backed, neural exercises and education. CerebrumIQ provides an IQ test with findings that are on par with those of standardised IQ tests.

It focuses on enhancing fundamental cognitive abilities, including reaction time, logic, memory, concentration, and speed. Users engage in cognitive training through neural games, intelligence puzzles, educational courses, expert video content, and lessons designed to improve mental abilities.

VISION

To establish Cerebrum IQ as the global standard in cognitive training, where structured development meets the pursuit of higher intelligence, sharper reasoning, and disciplined mental performance.

MISSION

To empower individuals to transcend distraction, overcome mental noise, and unlock their full cognitive capacity through precision-based training. We deliver measurable cognitive enhancement through engaging, structured content, not as entertainment, but as a path to lasting mental advancement in life, learning, and leadership.
