

▶ VALUES OF ARAI: VENTILATION COMPONENTS

The Arai RX-7V EVO vents and spoiler are designed to break off in an impact, ensuring that the Glancing Off performance of the shell is not compromised when it encounters obstacles. This is our Priority for Protection.

Each ventilation component is designed for optimal airflow & aerodynamic performance; adjustable front & top vents allow the rider to change the amount of air entering the helmet, while a movable wing and optional spoiler further enhance airflow.

Lightweight and designed to work in unison, each component plays an important role in rider comfort, focus and performance without compromising the Glancing Off ability and Arai PriorityForProtection.

More information on the Values of Arai can be found [here](#).

Our Glancing Off logo represents the ability of Arai helmets to deflect off obstacles, thanks to their round, strong, and smooth shell shape.
