Omni Calculator (www.omnicalculator.com) is a Polish tech company established in 2016 by Mateusz Mucha, with more than 20 millions users every month.

Omni Calculator's mission is to help people solve their problems, from small, everyday inconveniences to big, crucial issues faced in their daily lives. The company is created by science enthusiasts and techpassionates, but also by true geeks who aim to help people make better decisions based on numbers & facts rather than emotions, feelings, or intuition.

The website offers thousands free online tools designed to solve specific problems.

Users who encounter everyday problems (How many podcast episodes can I listen to in my dead time? How long should I boil an egg for the perfect result? How many pizzas should I order for a party?), people involved in science and education (students, teachers)– each of these groups will find something interesting. Each calculator is designed to solve a [real] problem faced by users. Big or tiny, our tools cater to the needs of people all around the globe.

The service is browser-based and free of charge. Omni Calculator is the most complex collection of online calculators available on the web, and the fastest growing one. The total number of calculators was doubled in 2021 alone (from 1000 to 2000), and it's still growing at an increasing pace.

The people behind Omni Calculator are a team of more than 50 scientists and researchers from various fields. Science enthusiasts and academics with hard-earned degrees work hand in hand with polymaths versed in multiple fields. Thanks to this extraordinary mix, the team can build calculators for even the most surprising topics.

The startup focuses on diversity; an almost 50% women international team includes members from Poland, India, Philippines, Spain, Hungary, the UK, and ten other countries worldwide.
